### REC\_DS using C\_Week 2\_COD\_Question 5

Attempt : 1

Total Mark : 10

Marks Obtained : 10

### Section 1 : Coding

#### 1. Problem Statement

Ashwin is tasked with developing a simple application to manage a list of items in a shop inventory using a doubly linked list. Each item in the inventory has a unique identification number. The application should allow users to perform the following operations:

Create a List of Items: Initialize the inventory with a given number of items. Each item will be assigned a unique number provided by the user and insert the elements at end of the list.

Delete an Item: Remove an item from the inventory at a specific position.

Display the Inventory: Show the list of items before and after deletion.

If the position provided for deletion is invalid (e.g., out of range), it should

display an error message.

### ***Input Format***

The first line contains an integer  $n$ , representing the number of items to be initially entered into the inventory.

The second line contains  $n$  integers, each representing the unique identification number of an item separated by spaces.

The third line contains an integer  $p$ , representing the position of the item to be deleted from the inventory.

### ***Output Format***

The first line of output prints "Data entered in the list:" followed by the data values of each node in the doubly linked list before deletion.

If  $p$  is an invalid position, the output prints "Invalid position. Try again."

If  $p$  is a valid position, the output prints "After deletion the new list:" followed by the data values of each node in the doubly linked list after deletion.

Refer to the sample output for the formatting specifications.

### ***Sample Test Case***

Input: 4

1 2 3 4

5

Output: Data entered in the list:

node 1 : 1

node 2 : 2

node 3 : 3

node 4 : 4

Invalid position. Try again.

### ***Answer***

```
#include<stdio.h>
```

```
#include<stdlib.h>
```

```
struct node{
```

```

    int data;
    struct node*prev;
    struct node*next;
};
struct node*head=NULL;
void ins(int data){
    struct node*nnode=(struct node*)malloc(sizeof(struct node));
    nnode->data=data;
    nnode->next=NULL;
    if(head==NULL){
        nnode->prev=NULL;
        head=nnode;
        return;
    }
    struct node*temp=head;
    while(temp->next!=NULL){
        temp=temp->next;
    }
    temp->next=nnode;
    nnode->prev=temp;
}
void dis(){
    struct node*temp=head;
    int index=1;
    while(temp!=NULL){
        printf(" node %d : %d\n",index++,temp->data);
        temp=temp->next;
    }
}
void dp(int pos,int n){
    if(pos>n||pos<1){
        printf("Invalid position. Try again.\n");
        return;
    }
    struct node*temp=head;
    if(pos==1){
        head=head->next;
        if(head==head->next);
        if(head != NULL)head->prev=NULL;
        free(temp);
    }else{
        for(int i=1;temp !=NULL && i<pos;i++){

```

```

        temp=temp->next;
    }
    if(temp==NULL)return;
    if(temp->next!=NULL)temp->next->prev=temp->prev;
    if(temp->prev!=NULL)temp->prev->next=temp->next;
    free(temp);
}
printf("\n After deletion the new list:\n");
dis();}
int main(){
    int n,pos,data;
    scanf("%d",&n);
    for(int i=0;i<n;i++){
        scanf("%d",&data);
        ins(data);
    }
    printf("Data entered in the list:\n");
    dis();
    scanf("%d",&pos);
    dp(pos,n);
}

```

**Status :** Correct

**Marks :** 10/10
