## NeoColab_REC_CS23231_DATA STRUCTURES

## REC_DS using C_Week 1_COD_Question 4

Attempt : 1
Total Mark : 10
Marks Obtained : 10

## Section 1 : Coding

1.   Problem Statement

As part of a programming assignment in a data structures course, students are required to create a program to construct a singly linked list by inserting elements at the beginning.

You are an evaluator of the course and guide the students to complete the task.

*Input Format*

The first line of input consists of an integer N, which is the number of elements.

The second line consists of N space-separated integers.

*Output Format*

The output prints the singly linked list elements, after inserting them at the beginning.

Refer to the sample output for formatting specifications.

***Sample Test Case***

Input: 5
78 89 34 51 67

Output: 67 51 34 89 78

***Answer***

```c
#include <stdio.h>
#include <stdlib.h>

struct Node {
    int data;
    struct Node* next;
};

struct Node *head=NULL,*newnode,*ptr;
void insertAtFront(struct Node **head,int a)
{newnode=(struct Node*)malloc(sizeof(struct Node));
newnode->data=a;
newnode->next=NULL;
newnode->next=*head;
    *head=newnode;
}
void printList(struct Node*head)
{ptr=head;
    while(ptr!=NULL)
    {printf("%d ",ptr->data);
    ptr=ptr->next;}
}

int main(){
    struct Node* head = NULL;

    int n;
    scanf("%d", &n);
```

```c
    for (int i = 0; i < n; i++) {
        int activity;
        scanf("%d", &activity);
        insertAtFront(&head, activity);
    }

    printList(head);
    struct Node* current = head;
    while (current != NULL) {
        struct Node* temp = current;
        current = current->next;
        free(temp);
    }

    return 0;
}
```

*Status :* Correct                                              *Marks : 10/10*
